

### PRODUCT No. 3880

#### Plastic catching floor – for 2x barrel

(Illustrative photograph)

#### Technical data

Material	Polyethylene
Capacity	112 l
Weight	20 kg
Section max. load capacity	250 kg
Max. load capacity	500 kg
Width	1400 mm
Depth	760 mm
Height	140 mm

#### Attributes

- Made of highly resistant Polyethylene plastic by rotary moulding method.
- Robust and profiled construction ensures high mechanical resistance.
- The grates are removable – ensuring easy cleaning.
- Catching floors do not corrode and are not subject to weathering or UV radiation.
- Resistant to most chemicals.
- Floors have low height and are fully recyclable.

#### Color variations

- Standardly – grate / basin – black / orange

#### Product purpose

- Designed to catch leakages of chemicals during emptying and filling of barrels.

#### Additions

- The dimensions of the catching basins may vary within range of +/- 1%.
- The catching basin for a particular chemical substance can only be recommended. Approval for a given chemical substance with a given concentration and its storage in a given environment may only be approved when the substance safety sheet is reviewed by a safety technician or a test facility.
