

### PRODUCT No. 4273-1

### Metal clamping tape with cotter pin

(Illustrative photograph)

#### Technical data

Material	Galvanized steel
Clamp	10 pcs
Tape	4 m
Width	5 mm

#### Attributes

- Made of galvanized steel.
- Used for attaching of tubes and waste bins to the post.
- Possibility to select the length of the clamping tape.
- Composition: metal tape, cage, cotter pin.

#### Product purpose

- Designed for attaching of waste bins to a post, handrails, lights, etc.

#### Additions

##### **Use:**

Application is universal for all commonly used diameters. The length of the tape is adjusted to a particular diameter. The joint is firm and does not loosen.

Installation: Select an appropriate tape length with sufficient overlap (depending on the diameter). Insert the cotter pin into the cage bends. Pass the tape through the rectangular part of the cage so that it extends over min. 30 mm and this piece of tape is then bent by means of pliers over the horizontal part of the cage so that the bending does not come loose. The tape is pivoted around the fixture, or is threaded through the apertures of the fixture to the post (e.g. bin bracket). The other end of the tape is passed through the cotter pin. The clamp is still loose. The cotter pin is firmly attached with pliers and the cotter pin is rotated counter clockwise to tighten. The tape is tightened until sufficient strength of bond is ensured. This type of tape is not suitable for disassembly and reinstallation. A new tape is used for reinstallation.
